**Projects:**

## **#1: School Management System:**

The main purpose of this project is to keep students, staff and parents information and manage school activities like attendance, message services and reports. Students and staff are provided with RFID, when tapped on the device it captures the student attendance stored in the DB through API service. Admin can view all staff and student attendance information and generate reports, and message will be sent to parents for absentees.

**Team Strength: 2**

**Responsibilities:**

### **Coding:**

- Understand the requirements and build the prototype screens.
- Develop the tier coding, business layer coding, interface development, creation of tables and joins as applicable for the project
- Understand the database concepts and write efficient queries;
- Raise clarifications / issues / concerns regarding work to the lead
- Deploy code build in testing environment.
- Participate in weekly meeting and update the development status.
- Prepare the test cases and functional & technical documentation.

## **#2: E-Commerce:**

This application works like an e-commerce platform. It has two modules, one for end users and the other for the admin. The admin can create project details and categorize them by quoting them. End users will review the projects and order the projects. After successful payment, the download link will be enabled for the users. The user can download the project and use them. If there is any assistance, there is a messaging service to contact the support team..

**Team Strength: 2**

**Responsibilities:**

### **Coding:**

- Understand the requirements and build the prototype screens.
- Develop the tier coding, business layer coding, interface development, creation of tables and joins as applicable for the project
- Understand the database concepts and write efficient queries;
- Raise clarifications / issues / concerns regarding work to the lead
- Deploy code build in testing environment.
- Participate in weekly meeting and update the development status.
- Prepare the test cases and functional & technical documentation.
